

FX-Tracker Synchronized Effects

FX-Tracker™ provides guitar players with many new effect types that have never been available before. Delay times or effect modulation periods that track your playing speed. Delay feedback or modulation depth that tracks your playing speed or playing volume. Automatic whammy or dive bomb effects that are triggered by your playing and many more. With seven effects categories and 87 effect types, there are endless possibilities. All parameters are controlled by MIDI so you can hook up to your existing MIDI rig. You can also output MIDI CC messages that reflect your playing speed or playing volume. All this in a stompbox form factor. Try one out today!

Features:

- Up to 70 effects and up to 100 preset locations
- Effect timing and effect depth can react to your playing speed and playing volume
- Seven main effects categories including delay, chorus, tremolo, flanger, filter, pitch shifter and MIDI out
- An additional delay effect can be placed before, after or in parallel with any of the six main effect types
- Delay time that can track your playing. Shorter delay with faster playing or longer delays with faster playing
- Your playing speed can change the modulation speed of chorus, tremolo, flanger, filter or pitch shifter
- Your playing speed or your playing volume can change the delay feedback level or the depth of the chorus, tremolo, flanger or filter effects
- Transition between a delay effect and any other effect by changing your playing speed or playing volume
- Several automatic whammy and dive bomb effects available
- Several programmable arpeggiator pitch shift effects available
- Reverse delay effect
- Several envelop effects for volume, chorus, flanger, filter or pitch shifter
- You can time the second delay effect to the chorus, tremolo, flanger or pitch shifter modulation speed
- You can use two types of delays at once and time them to each other or your playing
- Several different stereo effects including delay, chorus, tremolo and flanger
- Up to 60 seconds of stereo delay time including looping functions
- Full MIDI implementation. Control any parameter with an external MIDI controller or use MIDI messages to select from the 100 presets
- Synchronize a MIDI drum machine to your playing speed
- Output MIDI CC waveforms, envelopes or arpeggio patterns based on your playing speed or volume.
- Use an external MIDI expression pedal to manually modulate chorus, flanger, and filter or create a whammy pedal.
- You can download firmware updates to protect your investment

FX-Tracker is made in the USA and comes with a users manual and an AC adapter.
